MEDICAL TRANSFER VEHICLE MODEL: SE-A

Patient Transfer Vehicle SE-A is a truly unique and revolutionary product in the world for the interpretation of the safety for both of patients and hospital staffs.

SE-A combines below unbeatable functions and features:

- *Extremely safe to transfer the critical, severe injured or less ambulant patients between Operating Theatre, ICU, Emergency Room and Hospital Ward. It also can be used to help senior or obese patients in the clinics or nursing homes.*
- *Eliminate the possibility of spine injury or accident happened to the hospital staffs when they lift the patients from one hospital device to another one.*

Maximum load: 550 lb

- *SE-A is equipped with 5 electrical motors for up and down, transversal movement of patient transfer, forward and backward of the vehicle. A female nurse can easily transfer a patient from one place to another, normally such job is done by four hospital staffs.*
- *Height of the device can be adjusted for ward beds, operating tables, exam tables, procedure tables and stretchers.*
- *The single point of foot brake will lock all 4 wheels during a transfer procedure.*
- *Retractable side rails are installed on both sides for safety of the patient during transport.*

Optional accessories of I.V. Pole and Oxygen Cylinder can be installed on the vehicle.

Technical Parameter

Table top dimension	2140mm×810mm (7.02' x 2.66')
